

## Chapter 5

# CONCLUSION AND FUTURE ENHANCEMENTS

The Result Management System is successfully designed and developed to fulfill the necessary requirements. The management of the records will also benefited by the proposed system, as it will automate the whole procedure, which will reduce the work load. The System is able to provide the interface to the owner so that he can replicate his desired data. Though the most part of the system is supposed to act in the background, efforts have been made to make the foreground interaction with users as smooth as possible. The project has been developed to meet the aspirations indicated in the modern age.

There are few features which can be integrated with this system to make it more flexible. Below list shows the future points to be consider:

- Automated CGPA calculation based on SGPA of the student.
- Comparison of result of two students using two university seat number.
